PROFILE

A bioinformatics researcher and developer connecting biological questions with analysis design and interpretation. My work extends from microbes to humans, integrating diverse analytical approaches and building research pipelines and databases. AI-powered coding accelerates my research and amplifies my ability to automate workflows and develop analytical tools.

EXPERIENCE

MicrobiotiX · Senior Researcher · Bioinformatics — 2026.07 - PRESENT

- Analyze bacterial and phage genomes and design host-recognition protein candidates.
- Develop phage research databases and prediction tools; contribute to cocktail selection software and provide analysis technical support.

Wittgenbio · Computational Biology Research — 2026.07 - 2026.10

Concurrent role alongside employment at MicrobiotiX (approximately three months).

- Built a CRC single-cell atlas, annotated cell types and analyzed expression of target candidates.

Sanigen · Bioinformatics Team Lead · Senior Researcher — 2020.03 - 2025.11

- Managed NGS analysis services and the bioinformatics team; performed genomics, microbiome and transcriptome analyses.
- Automated analysis workflows and reports and contributed to marker and panel research.
- Provided technical support to clients and internal researchers and operated analysis infrastructure.
- Contributed to the technology-special listing task force and prepared technical-evaluation and listing-review materials.

SELECTED PROJECTS

PHAGE DATABASE AND DESIGN

Klebsiella Phage Reference Database & In Silico Design

Built a tail/RBP and KL-type reference database to connect protein sequences with capsule-target evidence. Integrated anchor compatibility, reference-label consistency, and protein-structure evidence to prioritize in silico tail-RBP design candidates for experimental follow-up.

SINGLE-CELL AND TISSUE EXPRESSION

CRC Atlas Annotation & Normal-Tissue Expression Analysis

Integrated public CRC studies into H5AD data and produced cell-type annotations and marker summaries. Compared tumor and external normal-tissue expression and produced CRC candidate tables using normal-tissue expression filters.

REPRODUCIBLE ANALYSIS PLATFORM

Sanigen Integrated Microbial Genomics Platform

Designed and maintained a shared Snakemake platform for 16S, ITS, WGS, and Illumina-ONT hybrid assembly. Standardized inputs, execution environments, QC checkpoints, logs, and report packaging to support reproducible analysis and review.

MARKER DISCOVERY

Comparative Genomics-Based Marker Discovery

Compared complete microbial genomes to identify candidate marker regions and assess their specificity, conservation, and suitability for downstream assays. Prioritized an approximately 17 kb region for experimental follow-up.

TECHNICAL SKILLS

Genomics	Bacterial WGS, phage genomics, assembly, annotation, comparative genomics, KL typing
Phage and protein	Tail/RBP analysis, depolymerase curation, structure comparison (Foldseek)
Single-cell analysis	CRC atlas construction, cell-type annotation, normal-tissue expression analysis
Workflow engineering	Reproducible analysis workflows and execution environments (Snakemake)
Programming	Python, R, Bash, Git
Phage annotation	Pharokka

EDUCATION

M.S., Medical Science · Kyungpook National University School of Medicine · 2016.02 - 2018.08
B.S., Biotechnology; Minor in Psychology · Kyungpook National University · 2008.03 - 2016.02

SELECTED PUBLICATIONS & IP

- Park et al. Novel next generation sequencing panel method for multiple detection and identification of foodborne pathogens in agricultural wastewater. **Frontiers in Microbiology** 14 (2023).
- Park et al. Development and evaluation of a next-generation sequencing panel for pathogens in fermented foods. **Journal of Microbiology and Biotechnology** 33(1) (2023).
- Kang et al. Nothofagin suppresses mast cell-mediated allergic inflammation. **Chemico-Biological Interactions** 298 (2019).
- Joint patent contribution: NGS-based primer set and detection method for foodborne bacteria (2022).

LANGUAGE

Korean - Native English - IELTS 6.5 (October 2023)
